INSTITUTO DE FÍSICA “Luis Rivera Terrazas”

SEMINARIO “DR. JESUS REYES CORONA”

“Understanding complex systems: A physicist's perspective to the formation of opinion in a society”

Dr. Soham Biswas

Departamento de Física, Universidad de Guadalajara

Studying complex systems became a very rich field of research for the last one decade and subjects like sociophysics and econophysics have emerged.

In this talk I shall first review different models for the opinion formation in a society. Some of these models also surprised people with proper predictions on socio-political events. After that I shall present my own work in this field.
